

# ELEVATE DESKTOP DT2

## USER GUIDE

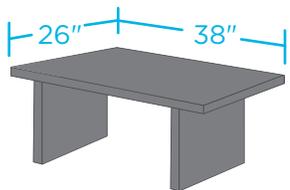

### OVERVIEW

The Elevate DeskTop™ DT2 is incredibly easy to use. Ready right out of the box, just place the DT2 on top of your existing work surface to create an adjustable height standing desk. This model features three color options and a spacious surface, providing adequate room for multiple computer monitors.

The Elevate Desktop DT2's work surface provides ample space for two 24" monitors.

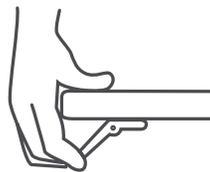

### HOW TO USE

1. Ensure you have ample space. The product fits best on a surface that's 38" wide by 26" deep. It also needs at least 35" of overhead space to fully extend.

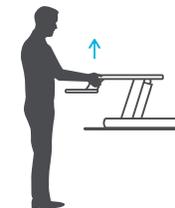

2. Unpacking and setting up the DT2 is a two person job. Once removed from the packaging, have a colleague assist you to place the DT2 on your existing work surface.

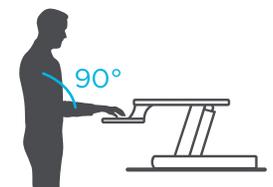

3. To raise the work surface, begin by grasping both handles simultaneously. The handles are positioned on each side of the desk.

4. Before lifting, press down on the work surface to activate the spring assisted lifting mechanism. The DT2 lifts most smoothly when topped by 7 lbs. or more.

5. After applying downward pressure, continue to grip the handles and raise the work surface to the desired height. Release the handles and the desktop will lock into place.

6. When positioned properly your elbows should rest at about 90 degrees when your hands rest upon the retractable keyboard.
