

Directions: Mix 1 serving in 300-400 ml water. Drink 1 serving 30 minutes before or during training. G-BOMB can be beneficial at several other times during the day (for example before going to bed).

L-Glutamine – very well-known and popular as a sports supplement – is the most abundant amino acid in the human blood, and it's in great demand throughout the body. Glutamine may become conditionally essential in certain situations, including during and after intensive physical training when the body cannot meet its needs by synthesizing Glutamine. This conditionally essential amino acid can be provided by dietary protein intake and by food supplements.

G-BOMB is a multi-component advanced Glutamine matrix that provides different Glutamines and other substances from this "family". Glutamine via Glutamate is converted to Alpha-Ketoglutarate, an integral component of the Krebs-cycle that is an energy generating cycle in the body. Our formula also directly provides AKG, Alpha-Ketoglutarate!

The complex G-BOMB formula provides the following benefits*:

contributes to the reduction of tiredness and fatigue • contributes to normal amino acid synthesis • contributes to the normal function of the immune system • contributes to normal blood formation • contributes to normal homocysteine metabolism • contributes to normal psychological function • has a role in the process of cell division

Aspartame free!

*These statements have been scientifically proven and authorized by the European Food Safety Authority.

Warnings: This product contains absorption modifiers that could affect your medications – consult your physician before use!

Allergen info: Manufactured in a facility that processes milk, soy and egg proteins, and gluten, peanuts!

Store in a cool, dry place. Heat and sunlight may damage the bottle!

Best before end: see on packaging. **Batch number:** see on packaging.
